

Xandria User Guide

What is Xandria?

- Xandria is an AI code snippet generator plugin for VSCode.

Installation

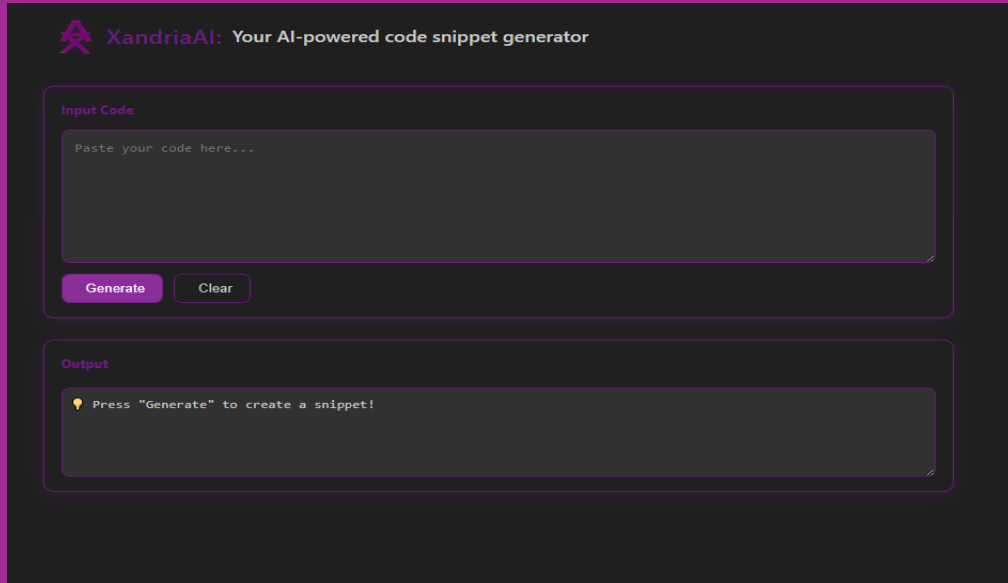

- Xandria is located in the extensions section in the VSCode marketplace. To install it, launch VSCode, click the extensions icon on the left hand side of the screen or press ctrl + SHIFT + X. Type XandriaAI and then click Install.

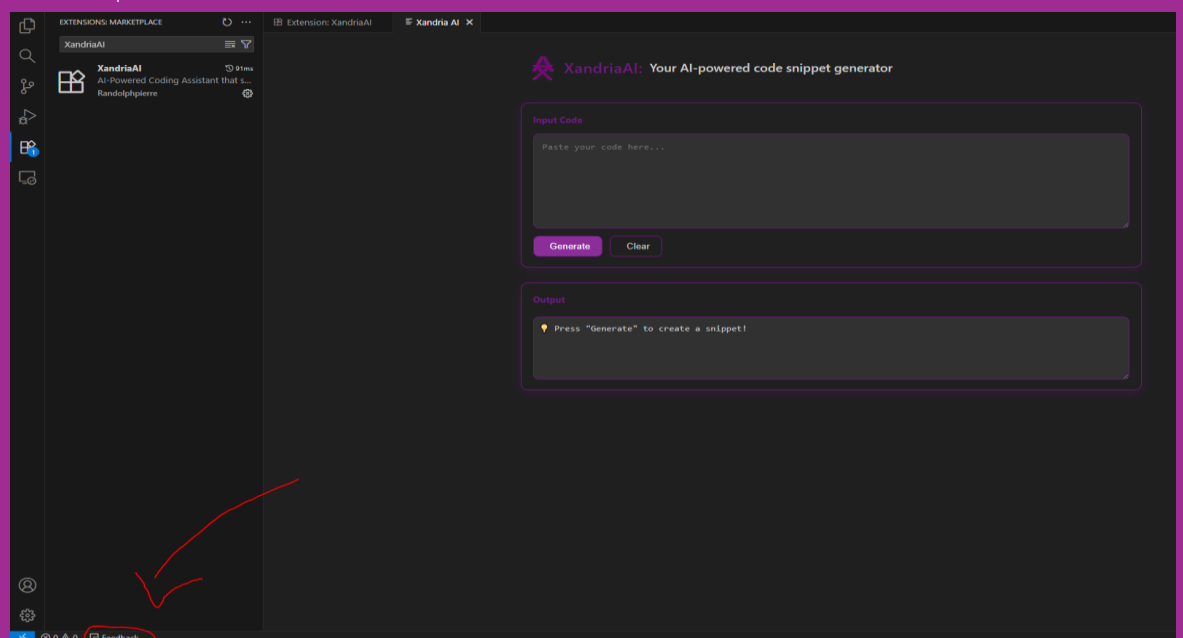

Getting Started after Installation

Xandria has a set of commands that allows the user to effectively utilize the plugin's main features. These all can be accessed by pressing `ctrl + SHIFT + p`. Afterwards the user can type in the search bar the following main commands:

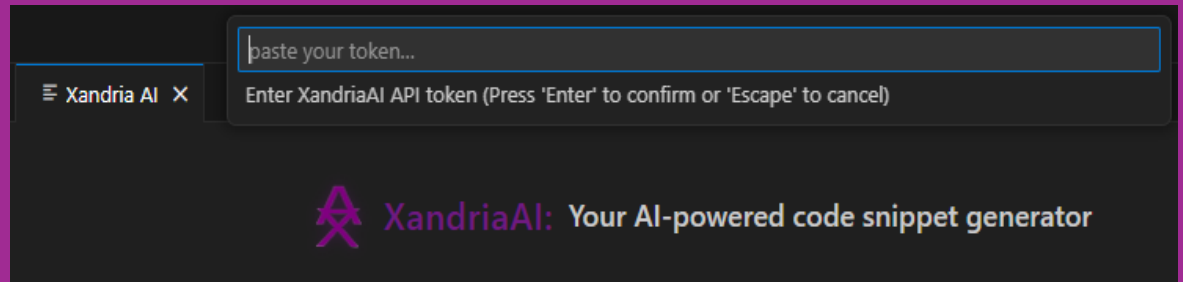

XandriaAI: Show Panel – Displays the panel that allows the user to type in something to generate a snippet of code

- XandriaAI: Send Feedback -This sends feedback on code suggestions. Can be accessed with the feedback button or from the actual command after pressing `ctrl + SHIFT + p`.

- XandriaAI: Set API token – The user enters an API token. Once it is accepted, the user can enjoy Xandria's services.

Important to note:

For the first version of Xandria, users will only gain full access once they enter a secure key (API token). There should be an update in 2026 that will address this issue and allow users to have unlimited access.
